

AMERICANS FOR MODERN TRANSPORTATION

OUR MISSION

Improving both the safety and efficiency of our transportation system is essential to meeting the on-demand needs of modern businesses and consumers. We advocate for policies that will modernize the delivery of products and consumer goods to businesses and consumers across the country.

SUSTAINABLE

Environmentally conscious modifications, incentives for alternative fuels, and modernized trucking equipment, such as Twin 33 trailers:

- Improve freight efficiency
- Reduce carbon emissions
- Protect environmental quality
- Strengthen economic and national security

HIGH-TECH

The exploration of smart and adaptive vehicle technologies should be supported and incorporated in new advanced trucking equipment. National implementation of advanced transportation systems, or Smart Road Systems, can:

- Improve roadway safety
- Increase fuel efficiency
- Reduce travel times and road congestion

SAFE

Improved road and bridge infrastructure means a safer environment for all drivers and their passengers to navigate. All new roadways should be constructed with features to promote longevity and a safe, high-quality driving experience for all vehicles including:

- Rumble strips
- Widened shoulders
- Well-engineered asphalt
